

ABSTRACT

- 5 A shapeable, weather-resistant anti-slip panel has a cut-resistant anti-slip coating on a rigid substrate and a pattern of cuttable lines; this enables the panel to be shaped by cutting the substrate along selected lines and overcomes the problem with known weather resistant anti-slip panels that the anti-slip coating particles, being very hard, make the anti-slip coating very difficult to cut or drill, as the coating readily and speedily blunts cutting tools.
